- Thank You

## Introduction

- The project is based on developing a website where we can have a video chat with our friends and family. This website is made using django and web rtc. This website can be easily handled and can be managed by any one .

# METHADODOLOGY

- I developed this website using HTML,CSS , javascript , django , webrtc ,python .Majority of coding is done in javascript . In this website , I made page which can be easily understood by anyone. In this website , we can easily have a good video call with our friends and family . The main methodology here is django and webrtc which are used to connect peer to peer i.e p2p connection can be established.

# Implementation

*Here is the link for implementation video of our website.*

# Conclusion

- The final website was successfully made and was running smoothly without any errors. During this whole course of internship i learnt alot more about django and web rtc and also learnt alot about python.

Thank you
